

Scenario based answer

Set Question 1

1. Employee Salary Analysis

Question: Find employees who earn more than the average salary.

Logic:

- Calculate the average salary of all employees.
- Compare each employee's salary with the average salary.
- Display only those employees whose salary is greater than the average.

2. Customer Orders without Matching Records

Question: Find customers who have not placed any orders.

Logic:

- Compare the Customers table with the Orders table.
- Check which customers do not have a matching order.
- Display the names of those customers.

3. Product Sales Summary

Question: Display the total sales amount for each product.

Logic:

- Calculate the sales amount for each product (Quantity $\times$ Price).
- Add all sales amounts for the same product.
- Display each product with its total sales amount.

4. Department-Wise Employee Count

Question: Display each department with the number of employees.

Logic:

- Group employees based on their department.
- Count how many employees are present in each department.
- Display the department name and employee count.

5. Top 3 Highest Sales

Question: Find the top 3 highest sales transactions.

Logic:

- Arrange all sales transactions in descending order based on the sales amount.
- Select the first three highest transactions.
- Display those top 3 sales records.

6. Employee Salary Rank by Department

Question: Display employee name, department, salary, and salary rank.

Logic:

- Divide employees according to their departments.
- Within each department, arrange employees by salary in descending order.
- Assign ranks based on salary.
- Display the employee name, department, salary, and salary rank.
