

Set answer 2

Scenario based

1. Question: Find employees who have consistently received a salary increase for the past 3 years.

Logic:

- Check the salary history of each employee for the last three years.
- Compare the salary of each year with the previous year.
- If the salary increased every year without any decrease, display that employee.

2. Question: Find customers who made purchases in the last 6 months but not in the previous 6 months.

Logic:

- Find customers who purchased products during the most recent 6 months.
- Check whether those customers made any purchases in the 6 months before that.
- Display only the customers who purchased recently but did not purchase in the earlier 6-month period.

3.Question: Find products whose sales decreased by more than 30% compared to the previous month.

Logic:

- Calculate the sales of each product for the current month.
- Calculate the sales of the same product for the previous month.
- Compare both values.
- Display the products whose sales dropped by more than 30%.

4.Question: Calculate a 3-month moving average for product sales.

Logic:

- For each month, consider the sales of that month and the previous two months.
- Calculate the average of these three months.
- Display the moving average for every month.

5. Question: Find all duplicate records from a customer table based on email and phone number.

Logic:

- Check all customer records.
- Compare the email and phone number of each record.
- If multiple records have the same email and phone number, identify them as duplicate records.
- Display those duplicate records.

6. Question: List products that have not had any sales for 3 consecutive months.

Logic:

- Check the sales history of every product.
- Find products that have no sales entries for three continuous months.
- Display those products that remained unsold during that period.
